James Cameron's "Aliens" might have been one of the biggest movies of all time, but it's not the only sci-fi blockbuster to follow the blockbuster model. In a galaxy far, far away, another iconic sci-fi genre, the dragon, has a long history. What started as a children's book in China during the fourth century B.C. has become an iconic part of the cosmic genre -- and at the center of the most popular sci-fi franchise of all time. From George Lucas's first trilogy and the "Star Wars" franchise to directors such as Steven Spielberg and J.J. This story about a group of people trying to escape a building's explosion is a staple of all films that follow a similar plot. It's responsible for the original "Godzilla" and, while not the first of its kind, it's one of the first. 2. "Star Wars" (1977) "Star Wars" has been one of the most influential films in the history of the world. Some would even argue that it has shaped Western culture, thanks to the presence of three international icons: the rebellion's Rebel Alliance, the Galactic Empire, and the hero in the form of the lone warrior, Luke Skywalker. George Lucas's 1978 sci-fi fantasy has also become a cornerstone of 82157476af
